VENTURECON PITCH-TEAMS

May 21, 2019 | Munich

Blackwave – compression molding process for geometrically complex carbon components

ChargeX – modular charging solution for electric cars

Contunity – automated engineering platform for model-based embedded hard- and software development

e-bot7 – AI based SaaS platform for real-time customer support with automated answer queries & process workflows

Emqopter – complete unmanned drone systems and autonomous modules for drones in industrial applications

Fleep – integration of flexible, lightweight, recyclable electronic circuits in any object or surface

Hybrid Lidar Systems – Lidar systems for smart sensing and automotive, combining time-of-flight and phase-shifting methods

Lincode Labs – computer vision-based detection of manufacturing defects of less than 2 microns at high speeds

m-bee – modular battery inverters for system manufacturers and car makers

Merxius Software – software for augmented, mixed or virtual reality experiences - supports any 3D format, for all major headset

MicroStream – next generation data storage technology for developing ultra-fast Java in-memory database applications

Smartlane – scenario-based analytics engine for fully-automated and real-time transport optimization

Trioptotec – anti-microbial coating and additive using the photo-dynamic effect - suited for all kinds of surfaces

VIDRONA – AI & Machine Learning inspired predictive-maintenance analytics platform

VoltStorage – electric storage systems for solar power systems based on Redox Flow technology
